

I have been following the testing of "Broadband over Power Lines" and field testing done by the ARRL in Pennsylvania. As a 100% QRP (low power) amateur radio operator, I am 100% opposed to BPL service. It would wipe out substantial communication possibilities at QRP levels and force Ham radio operators like myself to use more power. This would increase health risks for my family and potential cause RF interference to my neighbors. Please do not allow further BPL testing or future service.

Thank you,
